BAGSPLITTER

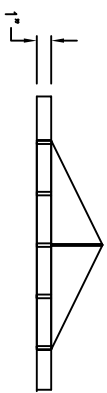

AN OPTIONAL ACCESSORY

The Bagsplitter is an optional accessory available for all Coffman storage hoppers using bagged chemicals. This feature makes it easier to dump bags into the hopper and minimizes dust contamination. The operator holds the bag of chemicals by both ends and pushes down on the sharpened bag splitter. This action splits the bag four ways and the material drops through the bar grate. The operator then grasps the bag at both ends and shakes gently to empty the contents. When a dust collector (also an optional accessory) is used, a draft of air flows past the operator, around the bag, and is discharged by the exhaust fan. This option allows bag dumping with a minimum of dust contamination to the working environment.
