Coffman Systems 41 Series Slakers feature a separate slaker and grit remover for increased efficiency and flexibility to conform to existing floorspace.

The separate grit remover and stabilization tank provides additional retention time and more efficient grit removal.

The Rotary Volumetric Feeder comes standard with a variable speed AC motor and is constructed from type 316 stainless steel.

Standard Features

- Heavy duty construction – entire system is 316 stainless steel
- Superior slaking capabilities with total process control
- PLC controller with color touch screen OIT
- Insulated slaking chamber
- Top mounted slow speed turbine mixer with load monitor
- Separate stabilization tank with grit remover
- Commercially available, non proprietary components
- Non flood rotary volumetric feeder with VFD control
- Integrated dust and vapor remover
- Standalone water control panel
- Nema 4X control panel
